

Web Cam Racing Cams is proud to introduce a new high performance camshaft for the Honda CRF and TRX 450. The profile on this cam is so big, you have to try it for yourself. This is bigger than any other camshaft currently available for these engines. You must use a higher compression piston, shortened valve guides, performance valve spring kit, and an adjustable cam gear. Due to the size of this profile, you must check all clearances! This profile is for use in serious race engines only.

This is a brand new billet camshaft, which means no core charge! Cams are in stock and ready to ship. MSRP \$199.00.

Call and ask for the "Mysto" profile.
